Disclaimer

I'm a frontend developer focused on React, that also is interested in React Native and backend with Nodejs. with 8 years of experience, working with Javascript since 2014. I am always working to improve my knowledge to deliver better solutions.

Skills

My latest professional experiences were with TypeScript, React, Nodejs, GraphQL, Prisma, React Native, Styled Components, react-query, and ES6, also worked with tests using Jest, react-testing-library, and Cypress for integration tests.

Professional Experiences

Software Engineer

November 2022 - March 2023 at [Passionate People](#)

Passionate People provide companies with additional technical capacity to power-up their digital transformation journeys with first-class engineers and consultants.

Passionate People is a leading Javascript focused consultancy in the Netherlands. Leading projects for multiple brands and sectors. Our weapons of choice include React, Vue and Angular. Passionate People has the Frontend Engineers & Consultants to improve your teams performance.

Full-Stack Developer

March 2022 - October 2022 at [Frank Energie](#)

Frank Energie is a disruptive company in the energy section. delivering an easy-to-use mobile app where the user can see its consumption and check estimates on energy and gas consumption. Some amazing things I could do at Frank Energie are an invoice predictor that gives users an estimated idea of the monthly costs of energy, integrating a digital authorization payment platform into the signup flow giving users more safety on payments, and creating an internal admin tool to visualize and update data from customers, removing from operations team lots of manual work.

Frontend Developer

April 2021 - February 2022 at [Helloprint](#)

Helloprint is a platform for printed products, and also has e-commerce for these products.

At Helloprint I started working with Vue.js, Nuxt.js, and Node.js in the backend, building their next generation of the e-commerce platform, aiming to make it more robust, user-friendly, modular, and dynamic. Then I was allocated to work on SEO team, where I started another great project improving the site performance, improving the site score on LightHouse, and optimizing the website reducing the large amount of bugs, and fixing broken layouts in the platform.

Frontend Developer

December 2020 - April 2021 at [Avenue Code](#)

Avenue Code is a top leading software consultancy company that works with American and European clients. There I was allocated to work for Good Eggs, building an app that helps to deliver fresh groceries in the SF area. Some of the deliveries were the new app settings page and a new product item component. The technologies were Typescript, React Native, NodeJS, and GraphQL.

Frontend Developer

April 2017 - December 2020 at [87 Labs](#)

87Labs is a consultancy company that works alongside its clients to define the best approach to their problems, even if they are consolidated tech companies.

At 87Labs I had the opportunity to work with a large number of projects like the ones listed below: Pipefy, GoDaddy, Consulta Remédios, and Leroy Merlin.

And this gave me a lot of experience in managing the workflow and developing my critical sense, also I gained experience with the whole process involved in creating software.

Frontend Developer Consultant

April 2019 - December 2020 at [Leroy Merlin](#)

I was able to help in the implementation and delivery of one of the most important flows in the platform, the cart flow (React with hooks, Styled Components). I helped build the new cart layout for the platform, which speeded up the loading time for the user. Added unit tests on React components, and helped to build the new company's hybrid app with React Native.

Frontend Developer Consultant

December 2018 - March 2019 at [Consulta Remedios](#)

With the team, I was responsible for implementing the features to launch the marketplace (Vue.js, ESLint, Docker). Features like a full-screen search for mobile devices and desktops, make it easier to view the results and speed up the search on the website, and improve the UI/UX.

Frontend Developer Consultant

June 2018 - November 2018 at [GoDaddy](#)

I had the opportunity to work with people from all around the world, in a self-managed project, with roles very well distributed and always aiming for quality and scalability in code.

The project I worked on was the blog editor (React, Redux, Redux-Saga, ES6, Scrum, ESLint, Enzyme), some of the deliveries I had: Create an API integration (Node.js) exchanging data from external sources of the platform of GoDaddy to the blog editor, add different statuses to the blog posts (Draft, Posted, Updated, Canceled), create the integration with the blog editor to the website builder, and refactor the pages using the style guide, leaving a more concise look among the platform solutions.

Full-Stack Developer

August 2016 - March 2017 at [Lets Events](#)

I helped to implement GraphQL, either in the front end or the back end, which made the requests on a critical page much faster. I had the experience working 100% remotely, so communication was important and was the basis of our teamwork. Skills: Ruby on Rails, GitHub, Backbone.js, GraphQL, Docker.

Frontend Developer

May 2015 - July 2016 at [Codeminer42](#)

Working at Codeminer42 gave me a broader vision of the programming world and how much I had to learn. I started working in an agile environment, using Scrum and learned a lot about how to manage my work. I also had a great opportunity to work for international projects where I was able to improve my English skills and communication between the team. As the company projects' focus was on Ruby on Rails, the philosophy was the code quality and clean code and that is something I brought to my life in all the projects that came after.

Education

Degree in Technology in Internet Systems

January 2013 - January 2016 at [Universidade Feevale](#)
